CBIR SYSTEM

Here we have a large set of images from our vacation from various location and it is common problem that we cant abl to find images after a certain period of time and hence it is better to make search engine(CBIR) to classify all the simmilar images of a particular image feed by us.
We have used **Chi Squared distance** to determine similarity.

The current number of images we are having are 805 and we will search 10 similar images fo an image feed by us in the whole collection.
